DETAILED ACTION

Allowable Subject Matter

1. Claims 1-6 and 8-17 allowed.
2. The following is an examiner's statement of reasons for allowance: The previous disagreement between the applicant and the examiner regarding whether the dark cross-hatching in Fig. 7 of Strecker represents a "spacer" notwithstanding, upon further consideration, the examiner recognizes that this element of Strecker at least fails to meet the limitation of being "of a predetermined thickness...for determining the positioning of the isotope container within the shielded container." Neither Strecker nor the other art of record teaches the existence of a particular preferred spacing for the positioning of the isotope container within the shielded container; therefore, even if the disputed element in Strecker is a "spacer," one of ordinary skill in the art would have no reason to predetermine the thickness of this element in such a way that it determines the positioning of the isotope container within the shielded container. Walker and Johnson merely teach the use of spacers in nested radioactive containers - neither contains any teaching of a preferred thickness for the positioning of a radioisotope container in a device for producing a fluid containing a radioactive constituent.

Further, the "compressible buffers" that the examiner previously cited column 3, lines 3-5 of Strecker as anticipating are "piercable stoppers made of an elastic material," which more closely corresponds to the claim limitation of a "frangible seal" at the end of the isotope container. This element of Strecker cannot represent both the compressible buffers and the frangible seals of claim 1, as claim 1 clearly indicates these to be

separate elements (i.e. the compressible buffers are mounted so as to contact the ends of the isotope container, while the frangible seals *are* the ends of the isotope container). The end cap in Fig. 7 of Strecker (see previous office action with labeling provided by the examiner) is more closely associated with the compressible buffers of the claim, but there is no indication in Strecker that this end cap is made of a compressible material.

Because the prior art does not teach "first and second compressible buffers mounted so as to surround at least partially the respective first and second hollow needles, each buffer providing an outer surface for contact with opposed ends of the isotope container," and "a spacer of predetermined thickness associated with one or each of the first and second compressible buffers for determining the positioning of the isotope container within the shielded chamber," claim 1 is allowable. Claims 2-6 and 7-13 are allowable at least by virtue of their dependence from allowable claim 1. Claims 14-17 are directed towards the method of constructing the allowable apparatus of claim 1, and the same logic for the allowability of these claims applies *mutatis mutandis*.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MICHAEL MASKELL whose telephone number is (571)270-3210. The examiner can normally be reached on Monday-Friday 8AM-5PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Kim can be reached on 571/272-2293. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
